

x|act i

Precision Pressure Transmitter for Food Industry, Pharmacy and Biotechnology

- ▶ with integrated display and operating module
- ▶ hygienic version
- ▶ flush welded diaphragm
- ▶ nominal pressure ranges from 0 ... 350 mbar up to 0 ... 35 bar

DESIGN

Our piezoresistive silicon sensor DSP 111 is the basis for our x|act i. The sensor is – together with digital compensation electronics – directly mounted into the pressure port, and is connected to the intelligent display and operating module via a I²C-interface of the compensation electronics. With the help of this innovative housing concept, precise and long-term stable pressure transmitters with flush-welded diaphragm and low thermal error can be produced.

OPERATING

The display and operating module allows an on-site setting of all x|act i functions, which can be easily and quickly parametrized via tree buttons:

- offset and span
- damping
- units
- display
- password

The device can be optionally equipped with HART® communication, and will then be delivered together with the appropriate configuration software (against additional charge).
