

## New Product Announcement: 4700 Bluetooth® Display

### Customer Value of 4700 Bluetooth® Display

The new Bluetooth display increases safety by providing access to device information from a safe location with the need for less equipment and less time in hazardous areas. It also provides greater productivity by quickly locating field devices and perform tasks related to configuration, device status, and diagnostics. The display provides great reliability as devices are protected from unnecessary exposure to the environment, increasing the reliability of both the device and the process. This product seamlessly Integrates into plant digitalization strategies.

### AMS Device Configurator Application

The user will connect to the Bluetooth® transmitter by using the AMS Device Configurator Application. This can be downloaded now from the Google Play Store for Android devices and at Emerson.com for the desktop application. This can be downloaded now from the Google Play Store for Android devices as well as at Emerson.com for the desktop application. The app provides security through standards-based architecture and extensive internal and external testing. The application is intuitive by using a modern interface and provides a user-friendly experience because it is similar to AMS Device Manager and Trex.
